## K-5 Mathematics

During the 2014-2015 school year, a new mathematics curriculum program, Eureka Math, will be implemented in all K-5 elementary classrooms in the Wachusett Regional School District. Eureka Math was selected by the District's Math Leadership Team after extensive research during the 2013-2014 school year.

Eureka Math is a comprehensive mathematics curriculum written by mathematicians and educators to specifically address the Common Core State Standards. Eureka Math lessons offer a high degree of alignment with the Common Core State Standards, and provide the focus and rigor necessary to help elementary students meet the demands of these standards. The goal of Eureka Math is to produce students who are not merely literate, but fluent in mathematics. To achieve the goal, Eureka Math focuses on building deep conceptual understanding of mathematical concepts while also building students' fluency with math operations and computation. At each grade level, instruction is organized into a series of six to eight modules that are carefully designed to build and extend students' mathematical knowledge as they move through the elementary grades.

For more information about Eureka Math, please visit:
